PROFESSIONAL SUMMARY

Full-stack engineer with 4+ years building high-traffic financial and enterprise products using React.js, Node.js, TypeScript, and Python. At Deloitte, eliminated 1,054+ hours of manual work annually via ML-powered automation — Applause Award 2024 & 2025. At ILM UX, architected the frontend of a stock trading platform serving 50k–100k daily users, with AWS certifications in Developer Associate and AI Practitioner.

EXPERIENCE

Deloitte

Full Stack Developer (Associate Analyst)

Aug 2024 – Present
Mumbai, Maharashtra

- **Built a full-stack Learning & Development portal** end-to-end — designed the MySQL schema, developed TypeScript-based RESTful APIs with Node.js and Express.js, and built the React.js frontend — centralising course listings and automating compliance tracking for internal employees, eliminating all manual tracking spreadsheets.
- **Engineered RESTful backend services** with Node.js and Express.js, including authentication middleware, role-based access control, and structured error handling — ensuring data integrity and audit readiness aligned with enterprise compliance requirements.
- **Developed and optimised React.js UI components** for internal dashboards, implementing reusable patterns, form validation, and responsive layouts — reducing front-end bug reports by 25% across the team.
- **Automated shift handover reporting via a Python/Flask pipeline** integrated with ServiceNow that replaced 3 manual shift handover reports per day — auto-generating and distributing structured reports to stakeholders, saving 1,054+ hours annually and reducing reporting errors by 30%.
- **Optimised complex MySQL queries and indexing strategies** on high-traffic internal applications, reducing page load times by 15% and improving performance under peak load.
- **Architected an ML-powered Change Request validation system** integrated with ServiceNow — trained a model on historically approved requests to auto-validate descriptions, justifications, backout plans, and attachments, eliminating the manual review process entirely.

ILM UX

Software Engineer

Jan 2022 – Aug 2024
Navi Mumbai, Maharashtra

- **Owned frontend architecture** for a live wealth management & stock trading platform handling 50k–100k daily users — built performant React.js and Next.js UIs leveraging custom React hooks, code-splitting, lazy loading, and SOLID principle architecture, achieving a 30% reduction in page load times via Lighthouse and Datadog profiling.
- **Designed and implemented a Backend-for-Frontend (BFF) layer** in Node.js to abstract sensitive backend endpoints — protecting user financial portfolio data, trade data, and session credentials, reducing security vulnerabilities by 30%.
- **Implemented Passport.js and JWT authentication and authorisation** achieving 100% compliance with internal security audits.
- **Shipped a privately published UI component library** (10–15 components) with Chakra UI and Storybook as an NPM package — cutting new feature development time by 25% and standardising design across projects.
- **Introduced unit testing frameworks** across the Agile development lifecycle, driving test coverage up by 35% — directly resulting in a 40% reduction in bugs caught in manual QA and a 20% decrease in post-release defects.

PROJECTS

CollabDocs – Real-Time Collaborative Editor [🔗 Live](#) | [Next.js](#), [TypeScript](#), [Node.js](#), [PostgreSQL](#), [Socket.io](#), [Yjs](#), [TailwindCSS](#)

- Built and deployed a real-time collaborative document editor supporting live multi-user editing with cursor presence and role-based access control
- Engineered Yjs CRDT sync over Socket.io for conflict-free collaborative editing with sub-second latency
- Implemented JWT authentication with refresh tokens, TypeORM migrations, and viewer/editor/owner permission model
- Deployed on Vercel + EC2 with Nginx reverse proxy and SSL via Let's Encrypt

Tunnel – Real-Time Chat Application | [Next.js](#), [Node.js](#), [Express](#), [MongoDB](#), [Socket.io](#), [Chakra UI](#)

- Built and deployed a production real-time chat application with 50–200 live users — supports instant messaging and group conversations with WebSocket-based communication via Socket.io.
- Designed RESTful APIs with Node.js/Express and MongoDB — optimised queries improved data retrieval efficiency by 30% under concurrent load.
- Reduced message latency by 20% through Socket.io event optimisation and efficient WebSocket connection management.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React.js, Next.js, Redux, Zustand, Chakra UI, Tailwind CSS, SEO Optimisation, Jest, React Testing Library

Backend: Node.js, Express.js, Flask, REST APIs, TypeORM, JWT, Passport.js, Socket.io, Microservices, Redis

Databases: MySQL, MongoDB, PostgreSQL, OracleDB

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, API Gateway), Azure, Docker, Linux, Git, CI/CD

Tools: ServiceNow, Storybook, Datadog, Lighthouse, Jira, GitHub, GitLab

EDUCATION

Mumbai University
B.Sc. Computer Science | CGPA: 7.93

Jun 2021 – May 2024
Mumbai, Maharashtra

CERTIFICATIONS

- AWS Certified Developer – Associate (DVA-C02)
- AWS Certified AI Practitioner (AIF-C01)
- HackerRank Certified: JavaScript Developer, Node.js Developer, Frontend Developer (React.js)
- AWS Partner: Agentic AI Essentials
- Agile Project Management Practitioner

AWARDS & RECOGNITION

- Deloitte Applause Award (2024 & 2025) — Received twice for enterprise automation saving 1,054+ hours annually.
- ILM UX Bronze Performer Award (2023) — Recognised as top performer for delivering high-impact projects and driving frontend innovation.
